

Instruction of Ear Drops (Otic Solution)

1. To prevent contamination of the eardrops, do not touch the applicator tip to any surface (including the ear).
2. Lie down or tilt the head so the ear needing treatment faces up.
3. For adults, gently pull the earlobe up and back (pull down and back for children). Drop the medicine into the ear canal.
4. Keep the ear facing up for about 5 minutes so the medicine can run to the bottom of the ear canal.
5. Wipe the tip of the dropper with clean tissue and keep the container tightly closed.
