

Instruction of Loceryl Nail Lacquer

1. File down the infected areas of nail.
2. Use an alcohol swab to clean the nail surface.
3. Dip one of the reusable spatulas into the lacquer. Do not wipe it on the neck of the bottle.
4. Apply the lacquer evenly over the entire surface of the nail.
5. Close the bottle tightly to prevent the solution from drying out.
6. Wait the nail lacquer to dry (approximately 3 to 5 minutes).
7. Clean the re-usable applicator thoroughly after completing each treatment procedure, using the same swab you used for nail cleansing. If the holes of the applicator are stuffed, please change a new one.
