

Instruction of Amocoat Nail Lacquer

1. Apply before bedtime. Trim the nails first, then use a disposable file to smooth the affected nail surface as much as possible.
2. Clean and wipe the smoothed nail surface with an alcohol swab.
3. Drop an appropriate amount of the solution onto the applicator.
4. Evenly apply the medication to the affected nail surface and the surrounding grooves. Allow the lacquer to dry completely (approximately 3-5 minutes), then apply again.
5. After using the bottle, immediately tighten the cap to prevent the product from evaporating.
6. After completing two applications, clean the residual solution on the applicator with an alcohol swab. If the small hole in the applicator is blocked, replace it with a new one.

This sheet does not include all drug information. If you have any questions, check with your doctor or pharmacist.
